

Valida Referrals

Right Care, Paperless, Saving Time and Managing Workload

Valida works alongside your patient management system of choice. When you need to refer to either secondary or community care, just select from our library of over 270 forms. Valida Referrals selects appropriate patient demographic and clinical information, allowing you to complete the referral based on local referral criteria, and automatically send it to the appropriate place.

Valida Referrals generates a referral form based on consultation findings, editable by the healthcare professional. Local criteria are checked to see whether the patient meets the agreed referral benchmarks and required information is automatically included in the referral.

- Valida Referrals offer high quality clinical decision support in your clinical workflow
- Every referral matches local clinical priorities and follows NICE guidance
- Referral forms are routed automatically to the correct location
- Each Valida Referral extracts relevant information from the patient record to send with the form
- A copy of the referral is automatically written back into the patient record
- Any changes to key patient data (i.e. BP, weight) in the form is written back to the patient record
- The automation of the process saves significant time per clinical session
- All detail is appropriately coded and written back into the patient's clinical record.

The screenshot displays the Valida Referrals software interface. At the top, it shows the patient name 'Mr Frad Smith' and birth date '2 Nov 1990'. The main form is titled 'Specialist referrals' and is divided into several sections:

- Referral information:** Includes dropdown menus for 'Referral speciality' (Dermatology - Two week wait) and 'Expectations of referral' (Diagnosis only). There are also fields for 'Details of other referrals', 'Person to attend with patient', and a 'Consent to information sharing' section with 'Yes' and 'No' buttons.
- Specialty clinical information:** Contains a note: 'This form is only for 2 week wait referrals with the indications listed below. If the patient does not meet these criteria please review management options and select General Dermatology referral in Referral Speciality above if required.' Below this is a checklist for a 'suspicious pigmented lesion' with 'Major Features (2 points each)' and 'Minor Features (1 point each)'. A 'Please enter a Total Score (0-10):' field is present.
- Referral Condition:** A section for 'Select referral condition' with several checkboxes, including 'Suspicious pigmented lesion with checklist score 3 or more' and 'Basal Cell Carcinoma (BCC) ONLY when delay may have a significant impact because of site/size'.
- History of the Lesion:** Includes fields for 'Location of lesion:', 'Size of lesion (mm):', 'Date lesion first noticed or Duration of lesion (months)', and 'Additional description of lesion:'. There is also a link to 'Go to the Attachments tab'.
- Other History:** Includes a 'Smoking status' field and a 'Current Smoker' checkbox.
